1. INTRODUCTION

The HDMI™ 4K×2K LPCM Extractor allows you to de-embed the audio signal from an HDMI source and output it. With this Audio Extractor you can take your original HDMI audio signal and convert it to digital optical or multichannel audio, allowing you to output your audio signal to an external multichannel audio system or to extend your audio signal pathway. It also has the added benefit of 4K×2K and 3D support, allowing full resolution video and eliminating the need to downscale the image.

2. APPLICATIONS

- Play a game console on monitor lacking audio output by connecting a separate audio system
- Extend your audio signal
- Audio extraction for non-HDMI AV Receivers or wider audio systems
- De-embedding of HDMI digital audio to optical digital or analog outputs
- De-embed HDMI multi-channel audio for use with non-HDMI equipped devices such as an AV Receiver
